

Suraj Barhath (Prince2®)

IT Consultant & ICT Infrastructure Specialist with strong expertise in Data Center Design, Implementation & O&M, Smart City/SAFE City Systems, ICCC Operations, and ITMS/ATMS/ELV/CCTV integration. Proven experience delivering large-scale tech projects across Rajasthan and Madhya Pradesh Smart City Programs and leading engagements with KPMG India, aligned with high-demand Smart City and ICT leadership roles requiring IoT, surveillance, and urban tech integration. Adept at SLA-driven service delivery, vendor/OEM management, quality & compliance, and leading cross-functional technical teams, matching the core expectations of ICT/Smart City/Data Center Service Delivery Manager roles in current market demand. Seeking to drive scalable innovations across Data Center Infrastructure, ICCC operations, and Smart/SAFE City digital ecosystems ..

SKILLS

- Project management
- System integration
- Vendor management
- Quality control
- Technical documentation
- Process improvement
- Compliance auditing
- Leadership proficiency

CERTIFICATIONS

- Prince2 Foundation
- Data Center Design

EDUCATION

B. Tech (ECE)

Rajasthan Technical University - Kota (2014)
GPA: 65%

PGDMM (Post Graduation Diploma in Marketing Management)
Ignou-Delhi-2020

PERSONAL INFORMATION

Date of birth: 1992-11-03

Experience

Consultant KPMG India

08/2025 - Current	Assisting MP police for their exiting and futuristic project i.e. Safe city and police station CCTV
	Lead design & implementation of Data Center infrastructure of State Data Center , including compute, storage, networking, virtualization, and disaster recovery, Cooling and Electrical Infrastructure systems
	Architect ICT/ELV solutions for Smart City, SAFE City, ICCC, ITS, and surveillance ecosystems of MP state Governments
	Ensured alignment of project deliverables with MeitY guidelines, e-Governance standards, cybersecurity policies, and national digital frameworks.
	Contributed to bid process management, including preparation of RFPs, BOQ , DPR , evaluation of technical bids, vendor assessment, and compliance verification.
	Translate functional and operational requirements into technical specifications , solution architectures, and implementation roadmaps—consistent with industry expectations of converting client goals into technical requirements
	Draft all supporting documentation: SRS, functional specs, design documents, SOPs, audit checklists, and compliance reports
	Preparing Project for SAFEGAURD CITY project for MP Police Conduct baseline assessments , feasibility studies, business requirement workshops, and system audits to understand client needs—aligning with standard IT consultant responsibilities of analyzing requirements and designing IT solutions
	SLA, Security, Audit activities of MSI as per RFP, supporting for the daily Reports, Billing and Payments, SLA Measurement, Solutioning of network, CCTV Surveillance and all the related components, Review of Project execution, Go-Live and O&M. Also supporting in various Draft RFP, DPR and Prebid queries and meetings. Supporting in sizing, costing and procurement.
	Coordinate with OEMs, system integrators, state IT departments, and Smart City SPVs throughout the project lifecycle.
	Conduct FAT (Factory Acceptance Testing), UAT (User Acceptance Testing), SIT (System Integration Testing) with government stakeholders to confirm that deployed systems meet functional and operational expectations.
	Oversee end-to-end Go-Live activities including system cutover, data migration, configuration validation, and final readiness checks.
	Ensure successful handover to O&M teams with training, documentation, and stabilization support
	Ensure alignment with government standards, cybersecurity guidelines, and ITIL-based O&M processes.

Assistant Manager(Service Delivery Manager)
Tata Advance System Limited - Bikaner, India

09/2023 - 07/2025

Managed a large cross-functional workforce of 100+ IT Technical Team , field, and operations engineers across Bikaner Zone , overseeing ICCC, Smart City operations , and Dial-100 / 112 / 1930 (Cyber Fraud) emergency response systems.
Ensured maximum uptime of the complete Data Center, IT infrastructure, ICCC, surveillance systems, ITMS, emergency response, forensic lab , and command-center applications—maintaining strict SLA compliance and service quality
Led Tier-2 & 3 Data Center operations & Maintenance consisting of servers, enterprise storage, network switches, database servers, smart racks, and power panel systems
Designed and reviewed ICT & IT infrastructure solutions , including network topologies, server architectures, cloud readiness, security frameworks, and Smart City integrations.
IT Technical Consultant for parallel ICT projects , providing end-to-end technical guidance, architectural design, and solution engineering.
Supervised all ICCC operational activities including real-time monitoring, response escalation, coordination with police/departments, and analytics-driven decision support.
Engaged multiple State and Central Government bodies for approvals, technical audits, reviews, and compliance inspections throughout the project lifecycle
• Co-ordination with different stakeholders, i.e., Electrical department, public health department, engineering department, and Protech (system integrator to design and implement the command-and-control center).
• Command Control Centre: Designing a Command-and-Control Centre.
Managed robust power continuity using DG, UPS, and AMF panel configurations, ensuring uninterrupted Data Center availability.
Oversaw PSAP operations using HEXAGON CAD & GIS, AVAYA EPABX , citywide video surveillance monitoring, and emergency call-center workflows..
• Activity performed from the Command-and-Control Centre.
Oversaw Fire Alarm, Access Control, Biometrics, WLD , rodent repellent, and environmental monitoring systems within the ICCC and Data Center ecosystem.
Conducted technical assessments , gap analysis, feasibility studies, and drafted technical proposals , architecture diagrams, and solution design documents

Senior Project Manager
Digitron India.

04/2023 - 09/2023

• Schedule assignments, monitor, review, and report project status regularly to manage project risks, P&L, and ensure successful project delivery and implementation, quality control, team building, and new requirements.
• Contributing to strategies and execution roadmaps (for purchases, strict budget controls, IT infrastructure, security, crisis/disaster and business continuity plans, asset management, incident management, audits, compliance and regulations, and vendor management).
• Lead in performing project planning and scheduling, managing tasks, and coordinating project resources to meet objectives and timelines.
• Reviewing and preparing standards with knowledge of the latest practices in toll collection systems and ATMS.
• Ensure project lifecycles on development and maintenance projects, estimation methodologies, and quality processes as per standard norms.
Led AMC and project planning , including task scheduling, effort estimation, resource allocation, and cross-team coordination to ensure all project milestones, KPIs, and deliverables were achieved within defined timelines
Prepared and reviewed technical standards, specifications, and solution frameworks aligned with the latest industry practices in Security Automation Project , ATMS , and Intelligent Traffic Management ,CCTV, Access Control, Vehicle management Project Technologies
Managed multiple concurrent projects with complete ownership of planning, execution, monitoring, stakeholder communication, vendor/OEM coordination, and performance evaluation.
• Project Handled:

● Adani Power Limited-Godda-Gharkhand
● Adani Solar Limited-Mundra-Gujrat
● Adani India Limited -AMC All Over india
● Jhajjar Power Limited -Haryana

IT Project Engineer Svnt Infotech Pvt Limited

02/2014 - 03/2023

Manage multiple simultaneous projects for enterprise clients (Vedanta, Birla, ITC, JPL, Adani, etc.) covering IT infrastructure upgrades, CCTV rollouts, automation systems, and control-room deployments.
Prepare project charters, execution plans, risk matrices, timelines, resource plans , and stakeholder updates in line with enterprise PMO standards.
Lead end-to-end implementation and lifecycle management of enterprise CCTV systems , including camera design, layout planning, bandwidth sizing, storage planning, and smart surveillance integration
Manage deployment, configuration & optimization of VMS platforms such as Milestone, Genetec, Bosch, Honeywell , and integrate with video analytics modules (ANPR, face recognition, intrusion detection, perimeter analytics, object tracking)
Conduct FAT, SAT, UAT , and Go-Live validation for CCTV and security systems, ensuring compliance with organizational and industry standards.
Oversee deployment and integration of Access Control Systems , including biometric, RFID, smart card, turnstiles, boom barriers , and enterprise access-control software.
Design and manage Plant Automation and Industrial OT systems such as fire alarm, gas-detection sensors, SCADA-integrated safety systems, WLD, BMS, and facility automation
Implement Vehicle Management Systems (VMS) including ANPR gates, RFID-based vehicle tracking, parking management, weighbridge automation, and entry-exit flow optimization
Ensure integration between CCTV, ACS, Vehicle Management , and industrial automation platforms
Design and manage IT networking architecture, including L2/L3 switching, routing, VLAN segmentation, firewall policies , and network security controls
Lead rack re-organization, upgradation, cable management , smart rack planning, and data center physical infrastructure improvements
Drive end-to-end Data Center design , covering servers, storage, virtualization, backups, power systems (UPS, DG), cooling, AMC planning, and periodic audits.
Maintain documentation of network diagrams, DC layouts, rack elevations, IP schemas , and system integration points.
Prepare complete BOQ for CCTV, networking, access control, plant automation, data center equipment, and IT infrastructure components.
Evaluate vendor proposals, review technical compliance, perform solution benchmarking, and recommend cost-optimized and scalable solutions
Lead material ordering, procurement planning, GRN, asset tagging , and inventory lifecycle management.
Conduct site surveys, feasibility studies, technical assessments , and prepare solution proposals for new and brownfield infrastructure projects
Develop integration strategies for CCTV, Access Control, Security Systems, VMS, Vehicle Automation, and IT infrastructure with enterprise platforms.
Ensure adherence to compliance standards, cybersecurity policies, business continuity strategies, and audit requirements.
